

## FIRST BYTE ELECTRON S-J INTERFACE

It's here at last! - a joystick interface for the Electron computer!

The interface takes all standard 9-pin Atari-style joysticks, e.g. Quickshot, Tac 2 etc and is fitted with ultra-reliable connectors. Simply plug the unit into the expansion connector on the rear of the Electron and switch on. Instructions are supplied for the user to include joystick movement into their own games, but the main use will be with games available from the large software suppliers.

We have been talking to software houses since January and most have agreed to include First Byte support within their programs (the first available game is Cylon Attack from A&F). As this is a gradual process, we are supplying a tape free with the interface, which gives a menu of 20 popular games currently available for the Electron. When you buy one of these games it only contains keyboard movements, so simply run the free joystick program, select your game and then load that particular game as normal. You can now play using your joystick - it couldn't be simpler! Overleaf is a list of these 20 games.

We realise that there will be other games which you may want to adapt for joystick, so we have supplied a second program on the same tape which enables you to do just that. Simply run the program, select the keys used for movement in the game you wish to run and then load as normal. As there are a number of ways of detecting keys on the Electron this technique may not work in every case, but as the routine does not interfere with keyboard operation the game can usually be played with a mixture of keyboard and joystick movements.

The interface is made of high quality materials and is guaranteed for 12 months. At a price of £24.95 this is the one Electron accessory which everyone will want.

The joystick interface launch is at the Electron User Show in London on 29th March. Computer dealers will receive their first supply shortly afterwards but if you have any difficulty obtaining one, then write to us enclosing a cheque, postal order or Access/Visa number for £24.95, with details of your address.

FIRST BYTE COMPUTERS, 10 MAIN CENTRE, DERBY, DE1 2PE.

GAMES COMPATIBLE WITH THE S-J INTERFACE

Killer Gorilla	Program Power
Moonraider	Program Power
Positron	Program Power
Croaker	Program Power
Swoop	Program Power
Bandits at 3 o'Clock	Program Power
Escape from Moonbase Alpha	Program Power
Cybertron Mission	Program Power
Cylon Attack	A & F
Kamakazi	A & F
Chuckie Egg	A & F
Atom Smasher	Romik
Alien Break In	Romik
Birds of Prey	Romik
Galaxy Wars	Bug-Byte
City Defence	Bug-Byte
Monsters	Acornsoft
Pool	Dynabyte
Pengwyn	Postern
Lunar Rescue	Alligata
