

MEGAMOUSE

tm

THE BEST BBC MOUSE

MEGAMOUSE is a beautifully designed peripheral used to move the cursor quickly and simply around the BBC for X-Y control, graphics, design, CAD and business applications. This UK manufactured quality mouse has a high resolution of 100 points per inch, utilises optical techniques and is highly accurate.

Sometime called the "whispering mouse", **MEGAMOUSE** incorporates a solid rubber ball which is quiet and grips smooth working surfaces such as desk tops, plastics and even glass overlays. Accuracy should not be lost through slippage as with a metal ball.

MEGAMOUSE simply plugs into the BBC 'B' user port. Superb ergonomics provides comfortable usage while the three buttons can be used independently or in association.
