MODE 7 MODE 7

JAJA Systems announce the launch of their exciting new addition to the range of expansion units for the Acorn Electron – the **MODE 7** adaptor.

IT IS NOT a software emulation and **DOES NOT** use other screen modes to simulate mode 7 display facilities.

IT DOES NOT require internal modification to the Electron and **DOES NOT** need a Plus One, etc. to work.

IT IS a full hardware implementation employing the **SAME** Teletext and Video Controller devices as the BBC computer.

IT DOES give all the Teletext display facilities.

IT DOES use 1k of memory for the screen.

IT DOES allow direct “**POKES**” to the screen memory.

IT DOES give the same **VDU** and **MODE** commands as the BBC.

The **JAJA Systems MODE 7** adaptor is the most important expansion yet to the Electron's display facilities. It is available at the all-inclusive price of **£89** from:
