# SOLIDISK (0702) 354674

TWOMEG 128K SHADOW/SWR

Only £60.00 inc. with 5 discs!*

Often, the hardware is just as good as the software it helps to run. In the case of the Solidisk TWOMEG 128K Shadow and Sideways ROM RAM board, this could be Computer Concepts Inter Software.

From the picture, this impressive collection is neatly lined-up: InterWord, I-Base, I-Sheet and Spell-Master are all there, leaving your four other ROM sockets on the Beeb undisturbed. Within the Inter system, you can have at the same time a big 20K plus document in any screen mode, a 24K printer buffer and four user dicitonaries. It's more than what the MASTER can do!

Besides the Inter family, The Acornsoft's View family too can exploit this TWOMEG 128K to the full. View 3.1, Viewsheet and Viewstore can all use the Shadow memory and the 24K printer buffer. Databases such as Inter-Base and Viewstore could use the RAMDISK* to speed up disc intensive operations.

BBC Basic, Wordwise Plus 1.4F, Acornsoft Pascal can all use the TWOMEG 128K.

But software alone is not the whole story. You will certainly want to know if the TWOMEG 128K is easy to fit and what else it can do.

*Please note that the price does not include the Inter software.

Fitting

Extremely easy. All you need is a screwdriver. Simply plug the TWOMEG 128K into IC socket No1, push the three colour-wires to S20, 21 and 22 and replace the 6502 CPU in the empty socket on the board.

Features:

The TWOMEG 128K can be used as a ROM expansion, it has 4 ROM sockets adding to the other four already on the BBC.

It can can be used to load ROM images or to develop ROM software: it has 8 sideways RAM banks of which 4 are mapped like the MASTER Sideways RAM (slots 4 to 7).

It can be used for Shadow memory, expanding the workspace of the language ROMs.

It can be used as buffer store for RAMDISK* and printer buffer. In fact, the 128K RAM is so easily configured in many ways that it is often 100% used.

Sideways ROM images can be write-protected by closing the Write-Protect switch, without touching the printer buffer and the shadow memory.

For the non-technically minded, all that is required is pressing a few keys in the MENU program (supplied on disc No 1) to load your ROM images and pressing the BREAK key after that.

*The RAMDISK feature is only available when using with Solidisk DFS 2.2 or ADFS 2.1.

Prices:

TWOMEG 128K with 5 software discs .... £60.00 inc.
MANAGER in ROM option if required .... £3.00 inc.

The 5 software discs are available on 40 and on 80 track DFS formats. Please specify.

Availability:

By mail order and from selected dealers.
