MEGAMOUS

THE BEST BBC MOUSE

MEGAMOUSE is a beautifully designed peripheral used to move the cursor quickly and simply around the BBC for X-Y control, graphics, design, CAD and business applications. This UK manufactured mouse has a high resolution of 100 points per inch, utilises optical techniques and is highly accurate.

Sometimes called the "whispering mouse", MEGAMOUSE incorporates a solid rubber ball which is quiet and grips smooth working surfaces such as desk tops, plastics and even glass overlays. Wigmore rejected technologies with a metal ball bearing which irritate with grating sounds and lose accuracy through slippage.

MEGAMOUSE simply plugs into the BBC 'B' user port. Superb ergonomics provides comfortable usage while the three buttons can be used independently or in association. This mouse can operate on processors with or without a second processor.

MOUSEPAINT software is freely provided and works in glorious colour.

*** BRITISH REALLY CAN BE BEST ***

MOUSEPAINT: This is a powerful but friendly standard graphics/ design package operating in Mode 1 providing a choice of 4 colours from a pallet of 8. Facilities include streamline drawing, rubber band lines, corrected lines, dotted lines, rubber rectangles, circles, ellipses, colour fill, colour lines, colour paper, hatch fill, store and load from disc or cassette, clear screen, clear icon menu, infinite paint brush, text etc.

CADMOUSE: Is an optional CAD/design package which is some of the most advanced graphics software on a BBC. It can be used in Mode O for super high resolution and just two colours or in Mode 1 for medium resolution with a choice of 4 from 8 colours.
