CADPACK SOFTWARE SG-100 SERIAL

The software CADPAK provides an easy method of creating pictures and saving them on disc. The use of a tablet as an input device allows pictures to be digitised from an original document giving you advantages over similar software requiring extensive use of joysticks or keyboard. The keyboard is only used when entering text or when saving a picture, all other functions are menu picked from the screen. This software allows pictures to be dumped to either an EPSON printer or to an ink jet printer.

GRAPHIC TABLET GR-400 SERIES

GR-410

This is a tablet which provides instant positional information over an active area 13" x 11" and 250 points per inch and transfers the data in a packed binary output to the BBC via the user port.

- 250 points/inch
- 1" lock height
- Packed Binary output

As an option a modified version of CADPAK is available.

GR-450

This is a serial option fitted to the above tablet.

- 250 points/inch
- 4 operating modes
- RS232 300/9600 bauds
- ASCII/Packed Binary output
- 1" lock height

COLOUR CARD 500

This BBC add-on is supplied as hardware which is connected to the 1MHz bus. A simple eprom provides the software to control the shades on the BBC screen, any 8 from 4096 shades are available. This card has increased bandwidth so that this card may be in a video or television environment suitable for both 75 ohms or analogue monitors. The card has a selection from two palettes which can be set to change half way down the screen giving the illusion of 16 colours on the screen.

- Daisy connection on the 1 MHz bus
- Spare user port

ARTIST PLUS (GR500)

This is a complete system consisting of the above Graphic System 400 and the Colour Card 500 with an operating artistic software called 'ARTIST PLUS' in an eprom. With this software you can change/select the shades on the screen. All menu switching will be provided by the pen so the only time a keyboard will be used is for data entry titles or when saving and loading pictures.
