

VOYAGER 7

The True Multi-Standard Multi-Computer Modem.

LOOK AT THIS FOR A SPECIFICATION AND COMPARE!

- \* AUTO-DIAL
- \* AUTO-ANSWER (RING DETECT)
- \* 300/300 BAUD FULL DUPLEX, Full CCITT V.21 Specification.
- \* 1200/75 BAUD FULL DUPLEX, Full CCITT V.23 Specification.
- \* 75/1200 BAUD FULL DUPLEX, Reverse Prestel, Full CCITT V.23 Specification.
- \* 1200/1200 BAUD HALF DUPLEX, File Transfer Mode Full CCITT V.23 Specification.
- \* Lightning or Line protection as standard. Mandatory in certain countries.
- \* Automatic support of TTL input levels.
- \* Ring detect Auto-Answer as standard. (Will not answer telephone if computer is not ready).
- \* Full software control of modem possible.
- \* Full function L.E.D. display including transmitting and reception of data.
- \* Optional Auto-Baud rate generator.
- \* Optional 110v mains supply.
- \* Optional Bell Tones (Full Bell Tones are illegal in the UK).
- \* Optional Telephone lead for most countries round the world. eg. Australia.

The Voyager 7 is a state of the art design making full use of 1986 technology to provide all home users with a reliable, low cost, fully functional modem with a superior specification to traditional multi-standard modems originally designed for the BBC. By full use of the latest technology in both design and manufacture of the Voyager 7, Modem House have been able to incorporate massive savings in production, with the saving passed directly on to the end user. The Voyager 7 directly compares to other modems costing up to £70.00 more, but the Voyager includes the normally additional cost functions of Auto-dial and Auto-Answer, and thus the actual saving is even greater.

Auto-dial and Auto-answer on most modems are functions of software, and for the Voyager 7, a fully comprehensive range of software is available for most computers, which has been fully matched to the advanced specification of the Voyager. Most popular micro's are supported with specially written Voyager software, please note that not all standard software is sophisticated enough to drive the Voyager. With suitable software the Voyager 7 will access, and has been tested on almost every database and network throughout the world, including the very latest 80 column viewdata systems e.g. Casper. All standard systems are fully supported including, Prestel, Micronet, Cityservice, Viewfax, Agrivisor, Istel, Comet, Viditel, Viatel, Elnet, Beltel, BT Gold, One to One, PSS, Easylink, Dialog, Learned Information, Bulletin Boards etc.

The Voyager 7 has other unusual features as standard, including the facility to be taken anywhere in the world and operated on any telephone system, subject only to local power supply, and local telephone plugs. Voyager 7 will even work in the United States and Canada, and offers optional 110 Volt power supply and full Bell telephone tones. NB Full Bell tone specifications are not permitted by law in certain countries including the U.K.

### VOYAGER 11

#### The Professional Multi-Standard Multi-Computer Modem.

Another Voyager? Yes we are afraid it is. Voyager 11 is the multi-standard, multi-computer professional modem designed for business computers.

Retaining all the features of it's little brother/sister?, the Voyager 7, the Voyager 11 is designed for use with all Professional micro's, and offers an enhanced range of facilities for Business use.

Multi-standard V.21/V.23 specification offering 1200/75, 75/1200, 300/300 full duplex operation with 1200/1200 half duplex baud rates, with Auto-Dial, Auto-Answer supplied as standard. The Voyager 11 also offers the following options.

- (1) Extended (V.24) RS 232 connector, 25 way "D" type with gold plated contacts to full CCITT V.24 specification.
- (2) Positive and Negative power supply for external modules.
- (3) Battery charger option for Portable and Lap Computers.
- (4) Prestel bulk update facility on 1200/1200 half duplex.
- (5) Lightning or Line protection (Mandatory in certain countries).
- (6) Full RS 232 handshaking including DTR and DSR.
- (7) Automatic support of TTL input levels.
- (8) Ring detect Auto-Answer (Will not answer if computer is not ready).
- (9) Baud rate generator.
- (10) Hayes Compatibility.
- (11) Rapid half duplex turn around for file transfer.
- (12) V.22 optional upgrade.

Impressive is it not? But perhaps the biggest surprise is the price of the standard Voyager 11 unit. £99.95 excluding VAT, £114.94 including VAT.

It makes you wonder how other modem manufacturers can justify a price of £295 excluding VAT for a lower specification.

The Voyager 11 will also be supplied with matched software at an all inclusive price. Modem House have long believed that just because a small businessman purchased an IBM or similar machine, he should not be forced to pay very high prices for essential equipment. For example, the excellent and very widely used MULTICOM software from Richard Cumming and Associates which supports Prestel and all Viewdata systems, BT Gold and Electronic Mail networks, and has an excellent file transfer system, will be supplied with the Voyager as a complete system including cables at £199.95 excluding VAT. MULTICOM is available for the IBM range, IBM Hardware Compatibles, Apricot and Sirius Microcomputers. Similar Packages will be offered for all Business Micro's, including the less common systems.

In addition, ALL purchasers of Modem House equipment of any kind, will be given a free BT Gold mailbox to enable them to join the electronic mail revolution at minimum cost. This offer is a joint promotion between Modem House and Telecom Gold distributor New Technology Systems. Another Modem House first, and a leaflet is attached for your perusal.
