Pace welcome you to:

THE MICRO USER SHOW
CHRISTMAS 1984

You might be wondering why there has been so much interest in Communications recently.

You might be confused by the hoards of advertisements, reviews and news articles about 'comms'.

But there is one thing you can be sure about – Communications will affect YOU, and for the better.

We at PACE think that you ought to know more about the subject and we're prepared to help. For the duration of this Micro User Show, we have arranged a series of live demonstrations of communications products and services.

So, come along to our stand , listen, participate and ask your questions. Use the equipment and see for yourself the benefits.

And if you like what you see, the Nightingale modem and Commstar software for the BBC micro will be available at a special offer price of £139 inc VAT on the Micro User stand.

Pace at the Micro User Show

Following on from the success of our series of seminars at the last Micro User show, Pace are once again taking the plunge.

Guest speakers from Micronet and other services will be explaining in simple terms just what is available. In addition, a number of BBC computers fitted with Commstar are available for you to use and log on, at no cost, to some of the worlds largest (and smallest), databases. Technical staff will be ready to help you with any questions about existing products or new developments.

See the new Auto-Dial, Auto-Answer board in operation. This will retail very shortly at only £39 plus VAT and includes a utility disc for use with Commstar. The unit simply plugs into existing Nightingale modems and connects to the BBC via the User port. Up to 10 numbers may be stored permanently in the modem with the aid of battery backup. A further list (limited only by disc space), of numbers are simply held on disc and called up via a menu program.

Also on sale we will have the full range of quality Pace drives for the BBC with massive reductions available on recommended retail prices.

Finally, two exciting new games, Sorcery and

Skyhawk which are shortly to be released, will be on view to follow in the wake of FORTRESS. Not to be missed!

Pace Software Supplies Ltd, 92 New Cross Street, Bradford.
