ROMBOX

ROM expansion unit for the Electron and BBC microcomputers

The ROMBOX enables Electron and BBC users to run ROM based software such as Slogger's STARMON Machine Code Monitor or STARWORD word processor. Robustly constructed and attractively designed, ROMBOX provides sockets for 8 ROMS which may be the usual 8k (type 2764) or 16k (type 27128), but user selectable options also enable 4k ROMS and RAMS to be used.

Installation to the back of the Electron takes a matter of seconds and the Plus 1 Electron extension unit may be installed in the back of ROMBOX. A multi-way cable with connectors is provided for using ROMBOX with the BBC and here again, installation can be completed within seconds. Comprehensive fitting and operating instructions are provided.

* **Fully compatible with the Acorn Electron and BBC computers**

* **Robust construction and can be fitted in seconds**

* **Provides access to a wide range of ROM based software**

Slogger also produce ROM based software and high quality computer games. Further information may be obtained from **Slogger Limited, 215 Beacon Road, Chatham, Kent. ME5 7BU. Telephone: 0634 811634/41622.**
