

BUY 16K OF SIDEWAYS RAM GET 16K ABSOLUTELY FREE!

H.C.R. Electronics' sideways ram card is a must for the BBC user, allowing the user to run from disk sideways rom type software. Available with either 16K or 32K of ram fitted and compatible with all BBC's.

No soldering is required to fit the board which lies neatly under the keyboard, well out of the way of other add-ons.

H.C.R. has designed their Ram card to be fitted into any one of the four rom sockets in the BBC in order to allow the user to select if ram is to be high or low priority.

A write protect switch has been added which can be fitted either in the reset space, rear of case or in spare LED position on right hand front of keyboard. This prevents corruption of data loaded to ram.

An important feature of this board is that ram can be accessed direct from the keyboard with a straight forward *LOAD «Name»8000 eliminating the need for software.

Will run plugged into the H.C.R. Ram/Rom card.

SOME OF THE MANY ADVANTAGES:

- No soldering required, very straight forward to install and no modification to the BBC.
- Fits under keyboard, no physical interactions.
- No need for additional software.
- Available in either 16K or 32K, 16K can be easily upgraded to 32K by simply plugging in two chips.
- Write protect switch fitted.
