ADI

A very powerful Disc Utility ROM for standard and non-standard discs

* BBC, B+, Electron and Master Series
* Acorn 8271 DFS 0.9, DFS 1.20
* Acorn 1770 DFS, ADFS
  (including Acorn compatible DFS's)

Features:

* backup most protected discs
* copy 40 track discs onto 80 track discs
* verify two non-standard discs
* edit any type of non-standard disc
* check and repair faulty tracks
* create new disc formats
* can operate in single and double density with 1770
* 16K EPROM plus detailed instruction manual

STATUS window reveals all important disc information:

* source, destination drives and density
* current track and sector
* sector length
* track, head, sector and length ID's
* sectors per track
* current FDC operation
* result and meaning of last operation

ADI Commands:

COPY A DISC - backs up normal and non-standard discs. Can backup 40 track   discs onto 80 track drives.
VERIFY TWO DISCS - verifies two normal or non-standard discs.
EDIT A SECTOR - edits non-standard sectors.
SCAN A DISC - reveals the format of a disc.
FORMAT A TRACK - formats a track to a defined specification
UNFORMAT A TRACK - unformats a track, like a blank track
MODIFY FORMAT PARMS - change the skew and format gap lengths
BUFFER EXAMINE - edit the buffer in hex/ascii or 65CO2 disassembler
GET SECTORS FROM DISC - reads sectors from a non-standard disc
PUT SECTORS TO DISC - writes sectors to a non-standard disc
READ TRACK DATA - reads all the track data into the buffer
WRITE TRACK DATA - formats a track with the contents of the buffer
ZERO BUFFER - clear the buffer.
TURN PRINTER ON/OFF - sends results from commands to printer
INITIALISE STATUS - returns the status window to its default state
*command - send command to MOS
*OSWORD7F - send command to OSWORD7F
