

The
Brightside
School

OBSERVER

Computer Aided Stage Design
for this year's school play.

Brightside School's production of *Guys and Dolls* has received help from an unexpected quarter - the school's BBC Micro. The original designs were drawn in the art room, scanned using the PLOTMATE A4S and LINSCAN, then altered using AMX Pagemaker. The resulting pictures will be used not only as costume designs but also as backdrops for the set and as a poster for this year's school play.

SCAN THE FRONT PAGE!

The Editor was so impressed with the PLOTMATE A4S and LINSCAN that she decided to use the scanner to re-design the Observer's front page. 'Designing typefaces on the computer isn't easy' she told us. 'With the scanner it takes a matter of minutes. Now we can reproduce all sorts of artwork using the computer. It's going to make our front pages look much brighter from now on.'

Above: The original sketches as scanned.
Below: Costume design with a little bit of help from Pagemaker.

Our thanks to Jonathan Inglis
for his assistance in the
design of this leaflet.
