

32K SIDEWAYS RAM

This unit utilises the latest static ram technology, it has 32K of sideways ram in a size no larger than a standard 28 pin EPROM. With only two flying leads terminated in clips to fit this module takes up one sideways ram socket, and does not use the user port to select ram banks, but instead uses the BBC's internal ram select circuitry to perform this function. The module is able to hold two 16K images. eg. PAGEDMAKER.

*Fully compatible with MR3000
